

Technical data

Power: 10kw
 Size (mm): L400 / D380 / H700
 Weight: 28kg
 Supply: 400V / 50Hz, 20A

Performance features

- compact table-top device
- max. chuck length: 300mm
- Ø 3-32 (carbide shank)

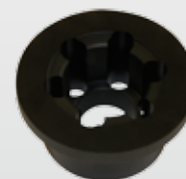

Art.-No.: 990-011C

Induction shrinking device for the fixing of carbide tools

With this redesign, well-proved components were partly taken over from previous models and summarized.

With this device, only carbide tools can be shrunk in and out.

Only for shrinking carbide tools in the size range of Ø3 – Ø32 mm. The screening process is not used with this method. The corresponding parameters for time and performance are set aside in an internal database. This makes an overheating situation virtually impossible for a skilled operator.
