

Art.-No.: 990-011CS

Technical data

Power: 10kw
 Size (mm): L400 / D380 / H700
 Weight: 28kg
 Supply: 400V / 50Hz, 20A

Performance features

- compact table-top device
- max. chuck length: 300mm
- Ø 3-32 (carbide shank)
- Ø 6-32 (HSS shank)

Induction shrinking device for the fixing of carbide and HSS tools

With this redesign, well-proved components were partly taken over from previous models and summarized. In particular fixed places were created for the accessories, e.g. shrinking aids etc. so that in the working area of the device, order and handiness have a high significance.

With this device both carbide tools (of Ø3 - Ø32) as also steel in steel (of Ø6 - Ø32) can be shrunk. The corresponding parameters for time and performance are set aside in an internal database. This makes an overheating situation virtually impossible for a skilled operator.
